Here is a developing circle pattern.

Here is one black circle.

Two white circles of half the radius have been added to the diagram.

1. Show that the fraction of the diagram that is now black is one half.

r of white circle : r of black circle 2r

area black circle $\pi(2r)^2$: area white = $2\pi r^2$

black circle : $4r^2\pi$, white circles : $2r^2\pi$

black - white = $2r^2\pi$, exactly $\frac{1}{2}$ of $4\pi r^2$ ✓

Four black circles have now been added.

2. What fraction of the diagram is now black?
$\frac{1}{2} + \frac{1}{2}(\frac{1}{2}) = \frac{1}{2} + \frac{1}{4} = \frac{3}{4}$

$\frac{3}{4}$ ✓

3. Fill in the table to show what happens as the pattern continues.

Pattern	Black fraction	White fraction
One black circle	1	0
Two white circles	$\frac{1}{2}$	$\frac{1}{2}$
Four black circles	$\frac{3}{4}$	$\frac{1}{4}$
Eight white circles	$\frac{5}{8}$	$\frac{3}{8}$
Sixteen black circles	$\frac{11}{16}$	$\frac{5}{16}$

(black fraction annotations: $-\frac{1}{2}$, $+\frac{1}{4}$, $-\frac{1}{8}$, $+\frac{1}{16}$)

(white fraction annotations: $+\frac{1}{2}$, $-\frac{1}{4}$, $+\frac{1}{8}$, $-\frac{1}{16}$)

4

4. Write a description of what is happening to the black and white fractions as the pattern continues.

The fractions alternate between adding and subtracting $\frac{1}{2(\text{denominator})}$ to the previous fraction, the denominator corresponds w/ how many of the smallest circles

Ex. there smallest ones are 4 black circles, previously $\frac{1}{2}$ of the patter was black, since the smallest circles are the same colour, it will increase. so $\frac{1}{2} + \frac{1}{2(2)} = \frac{1}{2} + \frac{1}{4} = \frac{3}{4}$, if the colour was different, then we'd subtract.
2

CCR 8 (10)

Here is a developing circle pattern.

Here is one black circle.

Two white circles of half the radius have been added to the diagram.

1. Show that the fraction of the diagram that is now black is one half.

black circle : πr^2

one white circle : $\pi\left(\frac{1}{2}r\right)^2$ ✓

2 white circles : $\pi\frac{1}{2}r^2$

$\pi\frac{1}{2}r^2$ is $\frac{1}{2}$ of πr^2 so black is the other half of the figure.

2

Four black circles have now been added.

2. What fraction of the diagram is now black?

one white circle : $\pi\frac{1}{4}r^2$

two small black circles : $\pi\frac{1}{8}r^2$

4 small black circles : $\pi\frac{1}{4}r^2$

Black : $\frac{3}{4}$ of figure ✓

2

CCR 8

3. Fill in the table to show what happens as the pattern continues.

| Pattern	Black fraction	White fraction
One black circle	1	0
Two white circles	$\frac{1}{2}$	$\frac{1}{2}$
Four black circles	$\frac{3}{4}$ ✓	$\frac{1}{4}$ ✓
Eight white circles	$\frac{5}{8}$ ✓	$\frac{3}{8}$ ✓
Sixteen black circles	$\frac{11}{16}$ ✓	$\frac{5}{16}$ ✓

4

4. Write a description of what is happening to the black and white fractions as the pattern continues.

Whenever black circles are added, the black fraction increases by half of what was already there, and the white fraction decreases by half of what was already there. When white circles are added, the black fraction decreases by half of what was already there, and the white fraction increases by half of what was there.

Circle Pattern

Here is a developing circle pattern.

Here is one black circle.

Two white circles of half the radius have been added to the diagram.

1. Show that the fraction of the diagram that is now black is one half.

   If radius of large
   Circle: 2 small: 1
   $(2 \times 2) \pi = 2 (1^2 \pi)$
 $4\pi = 2(2\pi)$
   $4\pi = 4\pi$

(1)

Four black circles have now been added.

2. What fraction of the diagram is now black?

   1 small circle: 0.25π
   $0.25 \pi \times 4 = \pi$
   $\frac{3}{4}\pi$: black 75% ✓

2

CCR 8

3. Fill in the table to show what happens as the pattern continues.

125×125

2.5π
1.5π

0.25×0.25
0.125×0.125

0.25π

$1.25 \times 2.25 \pi$ 0.25×0.25
0.015625 $0.0625 \times 8 = 0.5$

Pattern			Black fraction	White fraction
One black circle	4π	2π	1	0
Two white circles	2π	π	$\frac{1}{2}$	$\frac{1}{2}$
Four black circles	π	0.5π	$3/4$ ✓	$1/4$ ✓
Eight white circles	0.5π	0.25π	$5/8$ ✓	$3/8$ ✓
Sixteen black circles	0.25π	0.25π	$11/16$ ✓	$5/16$ ✓ 4

4. Write a description of what is happening to the black and white fractions as the pattern continues.

The denominators multiply by 2 each time, while when you put in x# 2 of circles, you get ½x of the original circles. Every time black circles are added ½x black fraction is increased, while ½x is deleted after adding white circles. Same for white circles.

CCR 8 (9)

Here is a developing circle pattern.

Here is one black circle.

Two white circles of half the radius have been added to the diagram.

1. Show that the fraction of the diagram that is now black
   is one half.

   area of one black ○ — two
   area of white ○s

   πr^2, $\pi(2r)^2$, $2(\pi r^2)$, $2\pi r^2$, $4(\pi \frac{1}{2} r^2)$,

   $2\pi r^2$, ~~✗~~ ~~$2\pi r^2$~~ $4\pi r^2 - 2\pi r^2 =$

 $2\pi r^2 = \frac{1}{2}$ black cir-cle

   leftover black

Four black circles have now been added.

2. What fraction of the diagram is now black?

   Big black ○ = $4\pi r^2$ 2 white ○s = $2\pi r^2$,

   4 small black = $(\frac{1}{2} r)^2 \pi = (\frac{1}{4} r^2 \pi) 4 = \pi r^2$

   $4\pi r^2 - 2\pi r^2 + \pi r^2 = 2\pi r^2 + \pi r^2 =$

   $3\pi r^2 = \left(\frac{3}{4} \right)$ of diagram

3. Fill in the table to show what happens as the pattern continues.

Handwritten work around the figures:

$\pi\left(\frac{1}{4}r\right)^2 =$

$8\left(\pi\frac{1}{16}r^2\right) = \frac{1}{2}\pi r^2$
$\frac{5}{2} \cdot \frac{1}{4} \cdot \frac{5}{8}$

$\pi\left(\frac{1}{4}r\right)^2 = \pi\left(\frac{1}{8}r\right)^2$

$16\left(\pi\frac{1}{16}r^2\right)\pi 64 r^2 /16 =$

$\frac{16}{4} \cdot \frac{1}{64}$

$+\pi r^2$
$-2\pi r^2$
$\overline{2\pi r^2}$

$+\pi r^2$
$\overline{3\pi r^2}$
$-\frac{1}{2}\pi r^2$

$-\frac{1}{2}\pi r^2$

$2\frac{1}{2}\pi r^2$

$2\frac{1}{2}/4$

Pattern	Black fraction	White fraction
One black circle	1	0
Two white circles	$\frac{1}{2}$	$\frac{1}{2}$
Four black circles	$\frac{3}{4}$ ✓	$\frac{1}{4}$ ✓
Eight white circles	$\frac{5}{8}$ $2\frac{1}{2}$ ✓	$\frac{3}{8}$ ✓
Sixteen black circles	$\frac{11}{16}$ ✓	$\frac{5}{16}$ ✓

4

4. Write a description of what is happening to the black and white fractions as the pattern continues.

The white fraction = $\frac{1}{2}$ black circle's fraction. The black circle fraction next in the pattern = the previous white circle(1) fraction + $\frac{1}{2}$. EX. $1 - \frac{1}{2}(1) = \left(\frac{1}{2}\right)$, $\frac{1}{2} + \frac{1}{2}\left(\frac{1}{2}\right) = \left(\frac{3}{4}\right)$

CCR 8
⑨

Here is a developing circle pattern.

Here is one black circle.

$a_b = \pi r^2$

$a_w = \pi\left(\frac{r}{2}\right)^2 \cdot 2$

Two white circles of half the radius have been added to the diagram.

1. Show that the fraction of the diagram that is now black is one half.

$a_{black} = \pi r^2$

$a_{white} = \pi\left(\frac{r}{2}\right)^2 \cdot 2$

$= \pi\left(\frac{r^2}{4}\right) \cdot 2$

$a_{white} = \frac{\pi r^2}{2}$
2

Four black circles have now been added.

2. What fraction of the diagram is now black?

outer black = $\frac{1}{2}$

2 white = $\frac{1}{2}$, 1 white = $\frac{1}{4}$

1 small black = $\frac{1}{16}$

$\frac{1}{16} \times 4 = \frac{4}{16} = \frac{1}{4}$, $\frac{1}{4} + \frac{2}{4} = \boxed{\frac{3}{4}}$

2

3. Fill in the table to show what happens as the pattern continues.

Pattern	Black fraction	White fraction
One black circle	1	0
Two white circles	$\frac{1}{2}$	$\frac{1}{2}$
Four black circles	¾ ✓	¼ ✓
Eight white circles	⅝ ✓	⅜ ✓
Sixteen black circles	¹¹⁄₁₆ ✓	⁵⁄₁₆ ✓

4

4. Write a description of what is happening to the black and white fractions as the pattern continues.

The pattern is add, subtract, add, subtract etc. ✓
The number you add/subtract gets smaller
by ½ each time ex. −½, +¼, −⅛, +¹⁄₁₆. 2
